Quality of statistical data

All statistical data are subject to error, either through incompleteness of response or by way of limitations imposed by the design of the survey. Most official surveys are designed to produce national estimates. Where estimates are made for regions or other sub-populations, sampling errors may seriously limit the use of that information. The quality of such statistical data should always be assessed before deciding on its fitness for the tasks to which it is to be put.

While care has been used in processing, analysing and extracting information, Statistics NZ gives no warranty that the information supplied is free from error. Statistics NZ shall not be liable for any loss suffered through the use, directly or indirectly, of any information, product, or service.

Timed statistical releases are delivered using postal and electronic services provided by third parties. Delivery of these releases may be delayed by circumstances outside the control of Statistics NZ. Statistics NZ accepts no responsibility for any such delays.
